

### **Our Vision**

ASK's vision is to be a recognized leader in innovative, sustainable, engineered, and customer-focused solutions for performance critical applications in the oil and gas, hydrocarbon processing, power generation, pulp and paper, and other selected industries.

### Our mission

ASK aims to be a multi-industry company with a strong brand, which provides solutions that combine products, services, engineering, and customer-application expertise. The corporation is close to the customer by being direct-sales driven.

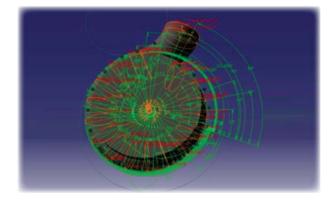

Engineering, innovation, and technology are cornerstones. ASK strives to be an attractive employer and to create an environment where employees can excel. The company focuses on creating value for its customers.

### **ASK Innotec**

The research and development unit of ASK supports the other divisions of the company and industrial companies in their development projects by providing a contract including research and special technical services like diagnostics and certified testing as well as one-off production and engineering. ASK innotec has expertise in materials and surface engineering, fluid technology, as well as in mechanics. Its core competencies in research contract also lie in these classical disciplines.

### Certification

Certified quality management ISO 9001 with scope of "Design and manufacturing of process centrifugal pumps according to API standard 610".

# **Product Description**

The models VS4/SL are vertically suspended, rubber or abrasion resistant alloy lined, radially split volute casing, semi-open or closed impeller, centrifugal slurry pumps.

# **Field of Application**

The pumps are designed for heavy continuous handling of highly abrasive slurries whilst submerged in sumps or pit.

VS4/SL pumps find application in:

- Mineral processing industry
- Paper and pulp industry
- Effluent treatment plants
- Sand beneficiation plants
- Ore beneficiation plants
- Plywood industry
- Sugar industry
- Power stations
- Glass and picture tube industry

### **Product Overview**

| Construction           | Heavy duty modular design, maximizing flexibility to meet rigorous customer requirements |            |  |  |  |
|------------------------|--|------------|--|--|--|
| Design methodology     | Advanced computer techniques including 3D modeling, FEA & CFD                            |            |  |  |  |
| Design standard        | Factory standard   |            |  |  |  |
| Design pressure rating | Up to 16 bar g @ 20 °C   |            |  |  |  |
| Operating temperature  | Up to 80 °C  |            |  |  |  |
| Flow rate              | Up to 250 m³/h   |            |  |  |  |
| Differential Head      | Up to 70 m   | - <u>-</u> |  |  |  |
| Spead                  | Up to 2200 rpm   |            |  |  |  |
|                        | Long coupled pump  |            |  |  |  |
| Configuration          | V-belt driven pump   |            |  |  |  |
|                        | Bare shaft pump  |            |  |  |  |
| Length                 | Up to 2 m (from skid to pump suction)  |            |  |  |  |
| Discharge Sizes        | Up to DN 100   |            |  |  |  |

## **Parts Description**

| Part                 | Description   |
|----------------------|---|
| Volute casing        | Includes front and rear casing made in grey cast iron, A 48 Class 40B.  |
| Volute liner         | Includes front and rear liners made in rubber or abrasion resistant alloy. these liners are removable.              |
| Impeller             | Rubber lined with grey cast iron core or fully made in abrasion resistant alloy, semi-open or closed.               |
| Shaft                | Robust cantilever design with minimum deflection, made in carbon steel (A 576 Gr1045) or stainless steel (type 420) |
| Shaft sealing system | Soft packed   |
| Bearing              | Heavy duty anti-friction bearings with minimum life of 25,000 hours, grease lubricated.                             |
| Bearing housing      | Heavy duty construction, made in grey cast iron.  |

# **Material Description**

#### Nitrile Rubber (NBR):

NBR is a synthetic rubber and it offers moderate resistance to abrasion with excellent ability to handle oils and hydrocarbons. It is attacked by ozone, ketones, esters, aldehydes, and chlorinated and nitro-hydrocarbons.

#### **Polychlorene (Neoprene):**

Neoprene, a DUPONT trademark for polychlorene, is superior to natural rubber in its resistance to oils and chemicals, and for higher-temperature applications. Although Neoprene has a lower resistance to abrasion than narural rubber. The tip speed for impellers is 33 m/s (or 6496 ft/sec).

#### Ni-hard:

The International Nickel Company developed special alloys of white iron with nickel. These are called Ni-hard and a number of alloys such as Ni-hard 1 to Ni-hard 4 are now produced. The presence of nickel increases the hardness but it also ensures the transformation of the austenite to martensite after proper heat treatment. The selection of alloying elements is based on the intended use and on the thickness of the cast part. The maximum carbon content is 3.2–3.6%, but when impact resistance is important, the carbon should be trimmed to 2.7–3.2%.

#### High chromium cast iron:

By adding chrome in the range of 12 to 28%, together with nickel and molybdenum, allows the casting of abrasion-resistant alloys that are tough and can be cast in large sizes to match the needs of the mining industry. Eutectic carbides in the form of  $M_7C_3$  in combination with an austenitic, martensitic, or pearlitic matrix gives a full range of alloys. Some of the components are cast pearlitic to allow machining, then heat treated to obtain an abrasion-resistant martensitic structure. They are often called by the foundries 16% and 27% chrome.

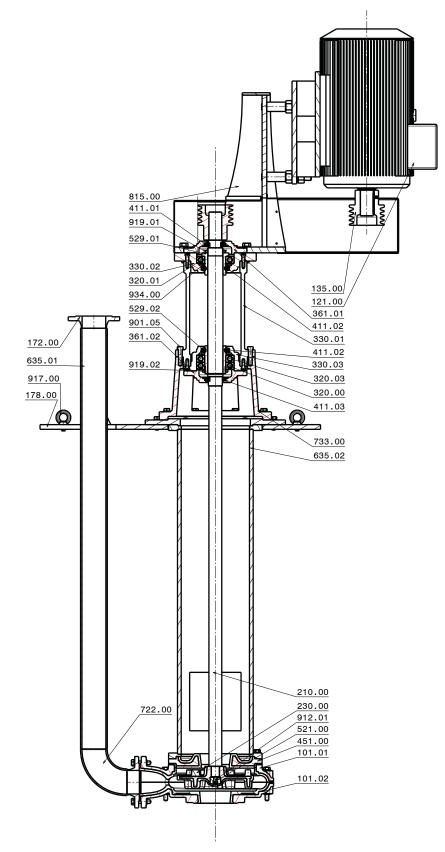

## **Product Benefits & Options**

- Optimum material selection
- Ease of maintenance
- Robust shaft
- Heavy duty bearing assembly
- Replaceable casing components
- No submerged bearings
- Several arrangements for pump and motor available
- Several methods of power transmission available
- Local control panel and instrumentation optional
